Project Code: STLU0015
Project Name: Feb 2026 SLU/YouGov Poll
Prepared for: Steven Rogers
Interviews: 900
Field Period: February 09, 2026 - February 22, 2026
Project Manager: Nour Abboud Frank
=====

YouGov interviewed 1448 Missouri (MO) registered voters, with the goal of screening for and surveying Missouri likely voters. The Missouri registered voters were then matched down to a sample of 1085, yielding a target subsample of 900 likely voters including 450 from each treatment group. The respondents were matched to a sampling frame on gender, age, race, education and treatment group. The sampling frame is a politically representative "modeled frame" of US adults, based upon the American Community Survey (ACS) public use microdata file, public voter file records, the 2020 Current Population Survey (CPS) Voting and Registration supplements, the 2020 National Election Pool (NEP) exit poll, and the 2020 CES surveys, including demographics and 2020 presidential vote.

The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity and education. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

The weights were then post-stratified on 2024 presidential vote choice as well as a four-way stratification of gender, age (4-categories), race (3-categories), and education (4-categories). The weighted dataset of registered MO voters was then subsetted on likely MO voters, and the weights were trimmed and recentered around 1, to produce the final weights for Likely Missouri voters.
